

GENDER DISPARITIES PERSIST IN THE FIELDS OF STUDY AND WORK

In tertiary education, enrolment is increasing faster for women than for men. However, gender disparities persist in the fields of study chosen by women and men. Women continue to be under-represented among graduates in the STEM fields and in ICT jobs.

This was a visual created by the UN. It depicts 2 stacked bar graphs that looked at gender disparities of women in 2 technology-based fields. The visual is done well in that the darker area of the bars clearly represent the percentage of women in their respective fields in relation to the total number of people. One critique though may be that the difference in the darker area's heights, in comparison to one another, appears much larger than it actually is.
